Rosedale Ace

March 2011

Next time you pass a Rosedale Technical Institute billboard take a closer look. You will see your fellow students up there! We would like to extend a huge thanks to Electrical graduate Matt Zottet, and Automotive student, Patrick Duddy for their participation in our marketing efforts. You can view their billboard at four different locations: the Thornbridge Bridge, University Blvd. (Moon Twp.), the 31st Street Bridge (Lawrenceville) and Liberty Rd. (Castle Shannon). Thanks again guys, you look fantastic!

Have you had a chance to visit the Electrical Lab recently? If you haven’t, we recommend you stop by for a look at the progress.

Rosedale’s contractor, instructors and students have spent the past few months tearing down, cleaning up, and building the new Electrical house.

The new sleek design was created by the minds of Electrical instructors and students have spent the past few months tearing down, cleaning up, and building the new Electrical house.

The purpose of this is to simulate a real working environment. The students will have the opportunity to assemble and install the conveyor system, as well as disassemble and troubleshoot the conveyor system. A lot of things are happening on Electric Avenue – stop in for a visit!
Time for an Oil Change?
Chris Read, an Evening Automotive student at Rosedale Technical Institute, proves that you can find success in Entrepreneurship. Chris has a military background. He spent 10 years as an Aviation Technician while in the Navy, so he knew he loved the mechanical field. Shortly after joining the Navy he decided he wanted to be his own boss and run his own business. Chris spent about a year gathering the knowledge, skills, equipment, and funding to open his mobile service shop in August, 2010.

For $29.95 he offers a basic oil change (5 quarts and filter) and for $34.95 he offers a full service oil change with a 12 point inspection. The best part is that he comes to you! He started off small, servicing personal vehicles and moved on to bigger and better things, servicing office parks and small companies such as plumbing and landscape companies. Incidentally, Chris received the contract for the area’s Budget trucks.

Recently, he partnered with a Mobil Oil Pitstop, LLC out of Columbus, Ohio. They provide him with other larger contracts that he can work to grow his business. With all of this growth, Chris is planning on adding another vehicle and another employee in the summer.

If you have any questions for Chris, you can contact him on his website: www.oilpitstop.com. Chris will be graduating from Rosedale this March. We are very proud to have you representing us Chris, and we wish you the best of luck!

“John of all Trades”

Rosedale is full of students traveling different paths in life. Each student has something different that inspired or motivated them to receive their education from this particular school in their particular field. One of these individuals is John Mahn, an Evening Diesel Technician student. Prior to Rosedale, John was a charter marine who has an interesting story about a 70 foot dinner cruiser he had to transport to Pittsburgh.

John departed on his long route in October, 2009 and headed from New York City to his destination in Pittsburgh, by way of the inter coastal waterways (Virginia and Florida). The type of ship that John was on was equipped with three different diesel engines. While traveling through Apalachicola Fl, the starboard engine broke down. Shortly after this, the port engine broke down, which left the crew stranded very far from their destination.

It took about a week to get a mechanic to repair the engines. At that very moment John decided that he was never going to let this happen again. If he was going to be the captain of the ship he wanted to know everything about the ship, including the innermost workings of the engines.

John left the ship with the other captain and made it home to his family just in time for Thanksgiving. It took the ship over two months to get to Pittsburgh. You may have seen the 70 foot dinner cruiser named “Fantasy” by The Cork Factory (near the Strip District). The ship is used for private charters as well as transporting Pittsburgh fans to sporting events.

The next time you’re getting that ride across the river to a Steelers or Pirates game, take a look at your captain because it just might be RTI’s John Mahn!

In memory...

Phil Chosky, age 85, passed away in his Shadyside home on January 4th of this year. Mr. Chosky is most well known as the founder of Rosedale Technical Institute in Pittsburgh and the Electronic Institute in Pittsburgh and Harrisburg. Mr. Chosky was also a well-known philanthropist who started by creating scholarships for the institutes.

Our condolences go out to Mr. Chosky’s friends and family as he will be missed.

Spending Time With Our Neighbors...

On January 24th, Propel Montour Charter School visited Rosedale Technical Institute. Ben Martin, Admissions Rep, compiled an action packed training on this day. The training was five hours long and was conducted by an outside professional who has extensive knowledge of the subject matter. The training was delivered to all of the Rosedale campus students.

The type of ship that John was on was equipped with three different diesel engines. While traveling through Apalachicola Fl, the starboard engine broke down. Shortly after this, the port engine broke down, which left the crew stranded very far from their destination.

It took about a week to get a mechanic to repair the engines. At that very moment John decided that he was never going to let this happen again. If he was going to be the captain of the ship he wanted to know everything about the ship, including the innermost workings of the engines.

The ship is used for private charters as well as transporting Pittsburgh fans to sporting events.

The next time you’re getting that ride across the river to a Steelers or Pirates game, take a look at your captain because it just might be RTI’s John Mahn!

In Service Days are INSANE!

Have you ever wondered what the instructors do on in-service days? Well, here is a little glimpse of how Rosedale’s faculty and staff prepare for the next term:

Gen Ed Instructor, Mark Simonsen conducts a little target practice in his classroom. His new class better watch out, he is getting good!

Math instructors Lenny Barsody and John Hold decide to battle it out using their swords instead of their calculators!

All of this is fun; however, the real applause goes to the faculty and staff that participated in the CPR training on this day. The training was five hours long and was conducted by an outside professional that taught volunteers various life-saving techniques. We would like to personally thank these individuals that took five hours out of their day to receive a certification that could potentially save one of our lives. Great job guys!

IMPORTANT FINANCIAL AID DEADLINE – MAY 1ST
The 3 “R’s” of Financial Aid: Reapply, Renew, Reward

Reapply for your 2011-2012 Financial Aid by keeping your individual FAFSA renewal appointments, which are now being scheduled by Rosedale’s Financial Aid Office. Reward yourself with peace of mind knowing you have met the May 1st deadline for your 2011-2012 PHEAA State Grant by completing your renewal FAFSA through the Financial Aid Office. At your renewal appointment, you need to bring a copy of your 2010 Federal Tax Return and W2 statements. When filing your 2010 tax return, remember to keep a copy for this appointment. You can help the Financial Aid Office by letting us know if you or your parents filed your 2011-2012 FAFSA independently.

OTHER FINANCIAL AID INFORMATION

Rosedale’s Financial Aid Office mailed out 2010 1098-T forms in January. These forms are part of paperwork you need when filing your 2010 Federal Tax Return. If you did not receive one of these forms, please see the Financial Aid Office for a copy. Contact your tax preparer or the IRS website on how the 1098-T form is used when preparing your tax return.

The Ride of a Lifetime

For the past year Tony Capriotti and four of his friends have been meeting at a local sushi restaurant to plan the trip of a lifetime. Tony has been with Rosedale as our “I.T. guy” since 1993. He handles everything computer related in the building, including managing our server.

On December 13th, 2010, Tony and his four friends flew out for a two week motorcycle ride through South America. They flew into Santiago and then took a bus 500 miles south to rent their bikes. They rented five BMW F650 GS’s, loaded them up, and started the ride in Pucon, Chile. From there, they crossed into Argentina and headed south. They spent two nights in Argentina, then went back into Chile and continued south.

The roads they traveled were mostly dirt and gravel. They saw mountains, volcanoes, and dozens of lakes. They made it all the way down to Coyhaique, Chile and ran into a small problem with a tire. They spent two nights in Coyhaique before continuing on. They traveled mostly dirt roads. The roads they traveled were mostly dirt and gravel. They saw mountains, volcanoes, and dozens of lakes. They made it all the way down to Coyhaique, Chile and ran into a small problem with a tire. They spent two nights in Coyhaique before continuing on. They traveled mostly dirt roads.

Wired for Success

Rosedale would like to welcome a new addition to the team of Electrical Instructors. Rick Mehn (pronounced ‘Main’) comes to Rosedale with an extensive background in the electrical field. Rick spent 23 years as an electrician for Jefferson Regional Medical Center and currently teaches at a US Steel training hub in Duquesne.

Rick has been formally teaching for a little over a year but has done some substitute work at Steel Valley VoTech and says that his entire career he loved coaching and mentoring other electricians. He loved the “coaching” aspect of it so much that he actually ended up coaching football for a little while at West Mifflin North High School as well as different middle schools. Rick is married with 3 children and his second grandchild just arrived recently. In his spare time he loves to play golf. He said that he doesn’t take a vacation if golf is not involved. So, if you need tips on how to improve your swing, or you just want to stop by and say hello, you can find Rick coaching our electricians in the evening electrical program. Welcome aboard Rick!
At the ripe age of 20, Dan Horhut, along with his older brother, Steve, have a climbing business. No pun intended, but Horhut Tree Experts is not only climbing and growing but it’s a hands on business, exactly like Dan wanted it to be.

In 2008, Dan Horhut was a senior at Carrick High School. He and his brother both had an interest in owning their own business some day. After school, Dan would invest his time in tree cutting and removal while Steve invested money for Dan’s passion. Over the months, Dan recognized a need for a mechanic to repair their vehicles, wood chippers, loaders and grinders. He knew he could do this but he needed professional guidance.

With just a few months left in high school, Dan did his homework and found Rosedale Tech to have everything he was looking for. In addition finding the perfect fit for his needs, Rosedale also participated in The Pittsburgh Promise Scholarship which Dan was awarded. Dan graduated with his Associates Degree in Diesel Technology in November, 2010.

Dan stated: “I learned what I needed to help me grow my business. My training gave me confidence and I am more efficient in learning how to diagnose and correct a mechanical problem. Training at Rosedale was similar to today’s work environment, everything was ‘hands-on’—just what I like. After my 16 month training and earning an Associates Degree in Diesel Technology, Horhut Tree Experts is expanding and it’s exciting. Today we own three trucks, seven pieces of heavy duty equipment and have a growing customer base. I feel like I’ve come a long way in the last two years and I know I can always reach out to my old teachers for continued support.”

Afternoon Automotive Technology student, Del Lindquist, was in a tough situation recently. He needed some electrical work completed on his home and he wasn’t sure where to start. Being a full time student and having full time employment as well as certain financial responsibilities makes it nearly impossible to schedule an electrician to look at the issue.

This is when Del came up with the idea to consult with his fellow students at Rosedale. Del approached Evening Electrical students Ed Hairston, Adam Carter, Rykell Taylor, Jeremy Snyder and Andrew Smith about the problems with his electrical wiring. The four students made the trip out to Del’s home to assess the situation. The students brought their own wiring with them, prepared to fix whatever Del needed.

Upon arrival, they found that the house contained old knob and tube wiring throughout. Like many other historical farm houses, the wiring was original to the home, possibly dating back to the early 1900’s. The electrical team updated and installed everything from new circuits to new interior lighting and receptacles and also corrected a faulty light in the basement. They did this while delicately fishing wiring through walls to preserve the structural integrity of the home. The whole process took about three hours to complete. Ed, Adam, Rykell, Jeremy, and Andrew truly enjoyed being able to help out a fellow student, and Del was very grateful to all for their hard work. He gave Ed one of his German Shepherd puppies to show his appreciation!

We’re confident that if any one of these guys has car trouble, Del will be there to return the favor.

As most of you know, President, Dennis Wilke, has a lot of Rosedale school pride. He also has a lot of pride for his “black and gold” teams, especially the Pittsburgh Steelers. To celebrate their incredible season Mr. Wilke took the time to throw a couple of “Playoff Parties” for the students, faculty, and staff.

During these parties the faculty and staff (including Mr. Wilke) served students hot dogs, nachos, and cake.

Stephaney Divito—Student Services Coordinator, compiled a victorious Steelers video that had memorable moments in Steeler history.
There are quite a few students at Rosedale who are parents, or are expecting, or have had a child recently, but this is the first time we’ve heard of such an amazing act of kindness in the classroom. Recently, Electrical Technology student Tobias Wolfe had his first child. As nervous as he was, his fellow students and instructors knew that he was going to make a great father, and wanted to help ease his mind and show support in any way they could. The students in Tobias’ class got together with Mr. Levine and Mr. Breskovich and decided to throw a “baby shower”. They got him all of the baby essentials including diapers, wipes, a changing table, and everything else he might need.

One of a Kind

It’s been a cold and unfriendly winter in Pittsburgh so far. Driving conditions have been less than pleasant, and we all hate scraping all of the snow and ice off of our cars. Who else is going to do it though? What is the probability that Steelers’ coach Mike Tomlin is out there cleaning off his players cars after they depart from their games? Slim to none would be our guess. Well, the President of Rosedale has been caught numerous times in the parking lot dusting off employee snow covered vehicles with a broom! Dennis Wilke is surely, one of a kind!

Mr. Wilke, with his wife, Chris, are pictured smiling in much warmer weather!

Representing RTI

Evening automotive student, Dan Pastor shared his expertise with Pittsburgh citizen Ken Harris one cold winter day. Dan was on his way to class and noticed a man with a flat tire on the side of the road. Dan did the right thing and pulled over to help this man change his tire. Through his conversation with Ken, Dan mentioned that he attended Rosedale Technical Institute’s evening automotive program. To thank Dan, Ken brought him dinner the next night at school. We are very proud that Dan is out there representing Rosedale in such a positive way!

What’s a Mock Interview?

As many of you know, once you reach your final term at RTI, you attend a course that helps you prepare your resume and provides you with interview coaching. This course is essential to the students because it gives them the necessary tools to compete in today’s job market.

Another piece of this class is something called a “mock interview”. This is where we arrange a simulated interview with a professional to better prepare the students for the actual interview process. For the past year, Amy Pascarella, Director of Student Services, has successfully arranged for potential employers to conduct these “mock interviews”. Employers such as Wright Automotive, #1 Cochran and Consol Energy have participated. The best part about this process is the result. A large number of our students have received job offers due to their “mock interviews”.

So be on your best game and remember, first impressions count!

Random Acts of Kindness

One of A Kind

It’s a bittersweet goodbye as the first afternoon class moves from instructor Dave Sladky to instructor Jim Hall. Pictured is the 3:00 Automotive Technology Class sitting on what used to be Jacob Beaver’s car. Del Lindquist recently bought the vehicle to scrap for parts and it has been an interesting addition to the class, so naturally they wanted to include it in the photo. Dave is going to miss his students but is confident they are going to continue to succeed at Rosedale. He says that they are an amazing group and he couldn’t have asked for a better first class.

What’s Going On Outside of RTI?

Thanks to Dan Kaplan’s Evening Electrical Class for all of their hard work assisting in the installation of our Smartboards. Special thanks go to students: Ed Hairston (pictured) and Adam Cartier for their exceptional effort!

What’s Going On Outside of RTI?

Electricians, Technicians, and . . . . Stock Brokers?

In Suzie McGugin’s Entrepreneurship class the students learn a lot of things about running a small business. One of the things taught is the purpose of issuing stock. In order to fully understand this point the students participate in a lesson on the Stock Market. The lesson contains a Stock Market game where the students receive $1,000,000.00 to invest in stocks of their choice. The online game simulates and coordinates with the real results of the stock market and produces rankings for each student.

The students learn the risk and return involved with the Stock Market. They also gain a healthy respect for competition. Good luck class, and remember, no insider trading allowed!

Where Did Dieselzilla Go?

Have you been wondering where “Dieselzilla” has been hiding? No, not in Japan but rather it’s parked in Parkway West’s parking lot. The auto body students at Parkway West have been welding, putting on Dieselzilla’s armor for its next terror of mayhem.

Todd Kiefer, Parkway West’s Auto Body Instructor, welcomed the Dieselzilla restoration project. “It’s a wonderful teaching tool. The students are thrilled and honored to be able to get their hands on the truck.” The auto body students have the opportunity to submit their own design for Dieselzilla’s decal/graphics scheme. The winning design will be produced by the graphic art students at Parkway West. What a team effort! Thanks Parkway West.
Inspiring Words from a RTI Graduate

We had the privilege of receiving some very valuable advice during January’s graduation ceremony. Patrick Handyside shared his history, experience, and keys to success with our graduates during this time.

Patrick graduated in 2008 from Rosedale Technical Institute with an Associates Degree in Automotive Technology. He then went to work as an apprentice technician at Monro Muffler and Brake. He worked hard and applied the principles that he learned at Rosedale and two years later, worked his way into a Service Manager position.

As he talked about all of the opportunities in the field, Patrick mentioned that there are employees at Monro that bring home a very comfortable paycheck due to hard work and incredible skill. He also addressed attendance. Patrick stated: “Attendance is a huge factor in your success. I’ll give you an example; the guy who shows up early gets the better jobs in his box every day, therefore he takes home the better paycheck.”

Patrick stated that his time at Rosedale still plays a part in his drive and success at his current position. He still takes everything his instructors told him to heart and does not hesitate to approach them for advice. He also stated: “I still call these guys; I call Paul Danner at least once a month for advice. I aspire to be like that, the guy that people know has the answers to the difficult questions.”

Patrick closed by wishing the graduates good luck and stating that he hopes they all aspire to be the best they can be in their field of study because in each field there is a lot of room for success and by the way... he’s hiring technicians!

Electrical Graduates
(left to right)
Eric Santee, Kenneth Shane Williams, Arnold Buckman, Max Snyder, Ian Dougherty, Matthew Zottet, Adam Doyle, and Timothy Lux (in front).

Not pictured: Andrew Gori, Nicholas Kaplon, Robert Dixon and Jeremy Snyder.

Diesel Graduates
(left to right)
Richard Fetterman, David Brakebill, Justin Williams, Charles Randall, Steven Moore, William Smith and William McCutcheon.
