Rosendale Tech Voted #1 Best Place To Work In Western Pa

Rosendale Tech has recently begun the re-accreditation process for the Accrediting Commission of Career Schools and Colleges (ACCSC), which is a voluntary, non-governmental, peer-review process that seeks to assess and enhance the educational quality of an institution, ensure consistency in institutional operations, promote self-evaluation and institutional improvement, and provide for public accountability within a peer-review framework. According to their website, ACCSC is committed to the important role of ensuring the integrity of educational programs as a means of serving the public interest and public accountability and serves an essential role in institutional and programmatic quality assurance as a critical component of the regulatory "triad" in partnership with federal and state governments that are responsible for the oversight of higher education institutions.

Five years, educational institutions are required to go through the accreditation process, which is a year-long process that includes a self-evaluation of the entire school completed by members of the school’s administration and is verified by a team of evaluators from the ACCSC, which provides an opportunity for discussion with school officials, faculty, staff, students, and other relevant individuals.

Upon completion of the on-site review, the ACCSC provides the accredited institution with a Team Summary Report, which summarizes the school’s compliance with accrediting standards. Upon review of the Team Summary Report, the educational institution then has the opportunity to respond to the report with information that demonstrates the school’s compliance with accrediting standards.

"The accreditation process is a great way for us to make sure we are serving our students properly across all departments. The self-evaluation will be a team effort, and we are looking forward to showing off our college during the team visit," said President Dennis Wilke.

Director of Education Ed Petrunak is spearheading the re-accreditation process. In addition, many staff members from across all departments are getting involved to assist with the self-evaluation.

The re-accreditation process is projected to be complete by November 2015.

ACCSC Re-Accreditation Process Begins At Rosendale Tech

Toys For Techs – Spreads Holiday Cheer For Families In Need

The 4th annual Toys for Techs holiday toy drive wrapped up this month. The drive benefited 18 families and 38 total children between the ages of newborn and 14 years-old.

For Techs was started to help provide holiday cheer for children of Rosendale Tech students in need of a little extra help during the season. In order to participate, students with children are asked to register anonymously. Upon receiving all registrations, students, faculty and staff are then asked to bring in new, unwrapped toys or monetary donations to purchase toys for the children.

Since its inception in 2011, Toys for Techs has helped a total of 67 families and 143 children.

"I look forward to Toys for Techs every year. It’s such a rewarding program," said Sue Henze, Admissions Assistant and Chairman of the newly organized R.E.V. Squad community service group. “The holidays can be a difficult time for our Rosendale parents who are struggling. It’s a good feeling to help us, our students, faculty and staff, are very generous. Our families who have received toys in the past have always been pleasantly surprised when they pick up the gifts for their children.”

We would like to thank all of those who participated to make this year a great success.

This fall, several advisory board meetings took place to discuss the further advancement of some of Rosendale Tech’s programs. During these meetings, the school invites representatives from local employers and career training centers to discuss the curriculum for each specific program as well as any new improvements that can be made to help better prepare Rosendale graduates for careers in the field.

"Rosendale Tech would like to thank everyone for their participation in the meetings and for their continued support of the school!"

Advisory Board Meetings

The recent advisory board meetings were held for the following programs:

October 16, 2014: Diesel & Truck Driving Programs
Rick Entinger – USXpress
Mike Chronister – Hill International
Joe Mazur – Hill International
Jeff Ame – Cummins Bridgeway
Lori Miller – Waste Management
Dan Kubisak – Pointspring
Kent McNaught – Lenzner/ Coach USA
Joe McCarthy – OVR Pittsburgh

October 28, 2014: Automotive Program
Ryan Westling – Team Automotive
Thad Gazzo – Mike Kelly Automotive
Barry Belk – ShadySide Honda
Howard Earnest – VH Ltd.
Bob Wiesen – Rohrich Mazda
Alan Scher – Ford Motor Co.
Matt Miller – Wright Automotive
Joe McCarthy – OVR Pittsburgh

Pictured (left to right): Mike Bruskovich, Sue Henze, Suzie McGuigan, Angela Taylors, Jake Bier, J.K. Mangan, Ben Moxley, Dennis Wilke. With college life on their minds due to the recent name change, the group thought it was appropriate to hold a "toys party."
Jennifer Davis Doesn’t Give Up

Jennifer Davis was looking for a career change when she enrolled at Rosedale Tech. Wanting to travel the country, she started the truck driving program in May 2014. Jennifer started the 10-week program off great in the classroom, but when it came time to get behind the wheel of the tractor trailer, things took a 180-degree turn. When she was able to finally get behind the wheel of the truck, driving was not what she expected. She spent many hours in “the yard” with the truck driving instructors, working hard on her driving skills before starting her on-road training.

Living in the City of Pittsburgh, Jennifer utilized public transportation as her primary means of transportation. She would take two buses every day to get to school and always managed to be on time for class. Her decision to ride a bus was cost effective, but caused her driving skills to falter over the years, which created a challenge for Jennifer when she was behind the wheel of a truck. To improve her driving skills, Jennifer began to drive her cousin, who was dealing with an illness, to and from doctor’s appointments. In one month, she had driven over 1,000 miles in a vehicle and helped to improve her truck driving skills.

Oftentimes, Jennifer thought about dropping out of the program, but with the support of her instructors she continued through the program. “We would not give up on Jennifer,” said Truck Driving Instructor Vaughan Greil.

Due to class changes, Jennifer had to take time off in between her training, but always came back. During her second “lay off,” Jennifer’s father connected her with one of his truck driving friends. Through this connection, she had the opportunity to participate in a shadow opportunity with a truck driver as a passenger on one of his trips. Spending time on the road in a tractor trailer helped to keep her motivated to finish the program.

Over the course of her training, Jennifer’s hard work and dedication was paying off and the instructors could see her progress.

The day Jennifer passed her CDL test in October she stopped in to visit with Student Services Coordinator Liz Lashuck to update her resume and discuss job opportunities. During the meeting, Liz made a phone call to U.S. Xpress, a trucking company Jennifer connected with during a recent career fair at Rosedale Tech. Before leaving Liz’s office, Jennifer had secured a job with the company.

Jennifer started with U.S. Xpress at the beginning of November. After five days of classroom training, she began her on-road training with a trainer. Jennifer is currently driving all over the country dropping hook loads with her trainer. She has been to places such as Texas and is currently in California. She still checks in with the truck driving instructors once a week to provide updates on her progress and share pictures from her travels.

“Jennifer’s story is such an inspiration to the program,” said Vaughan. “When I have students looking to leave school because they say it’s too hard, I always use her story to help them refocus on their goal.”

Rosedale Veterans

In The News

Rosedale Tech veterans were featured in a FRONT PAGE article of the Pittsburgh Tribune-Review on Veterans Day.

Family Business Leads Dan Horhut to Entrepreneurship

Rosedale Tech graduate Dan Horhut has been associated with tree cutting since he has been a child, working with family and friends. After graduating from the diesel program in 2010, he decided to continue in the business and opened up Horhut Tree Experts with his brother, Steven.

Dan attended Rosedale because he realized the importance of knowing how to work on diesel equipment. “Every piece of equipment I own is diesel operated. Learning this trade in school has taught me how to fix my equipment so I don’t have to hire someone to come and fix it,” he said.

Starting out, Dan sought advice from the instructors at Rosedale regarding their recommendations for the type of equipment he should purchase. Throughout the process of starting his business he figured out what he had to do to purchase equipment without taking out loans. To this day, every piece of equipment Dan owns was purchased without borrowing money.

“It took me five years to get the equipment I needed. In 2009, I started out with a one-ton pick-up truck and small chipper. Now, I own two dump trucks, a bucket truck, two wood chippers, three stump grinders, an excavator, and a bobcat,” he said.

Dan stated the business has been good for him and that he gets to utilize his diesel training doing monthly maintenance and repairs on the equipment. Reflecting on his time at Rosedale Tech, Dan enjoyed working with the instructors and the hands-on atmosphere he learned in.

Horhut Tree Experts is located at 2831 Castileview Drive, Pittsburgh, PA 15227. For more information or to request a quote, call 412-855-2703 or visit horhutreeexperts.com.
Hunter Curl Enrolled As First Student In Industrial Technician Program

Rosedale Tech graduate Hunter Curl recently completed the HVAC program. Before finishing the program, he decided he wanted to take his education further. After learning about the school’s newest program, Industrial Technician, Hunter was intrigued by some of the program offerings. He was especially interested in the opportunity to transfer some of his credits from his HVAC classes. It was then that Hunter decided to enroll in his second program, designating him the first student enrolled in Industrial Technician.

“I wanted to further my education and have a variety of skills to secure a great job when I graduate,” he said. “The Industrial Technician program offers classes that interested me, such as welding and hydraulics, and I want to get as much knowledge as I can while I’m in school.”

Hunter began the Industrial Technician program in late November and currently is in the hydraulics class with instructor Mark Simoneau.

“So far I really like the class. There are a lot of common aspects that I learned in my HVAC classes. Understanding the basic concepts from HVAC has really helped out so far,” he said.

Hunter was able to transfer 14 credits to his second program. Because of this, he is projected to graduate earlier than the standard 16-month program.

Hunter encourages any former Rosedale Tech grad to consider coming back for the Industrial Technician program.

“If you’re not really set on just doing one thing, like being an HVAC technician or an electrician, you should definitely look into coming back for the Industrial Technician. You can learn a lot of different skills that will help you make you more marketable to employers,” he said.

If you are a Rosedale Tech graduate and want to find out if your credits are transferable to the Industrial Technician program, call 412-521-6200.

Immigrant Brothers Share Dream Of Working In The Trades

Brothers Mateusz and Krzysztof Wasielweski came to the United States with their family 11 years ago from Poland. Leaving all that was familiar to them, the brothers still had each other. Growing up just two years apart, they were always together at school. This trend continued after high school as both brothers are currently enrolled at Rosedale Tech.

Krzysztof, the second oldest of three boys, always was interested in working with diesel equipment. After working on equipment at his stepfather’s construction company, Zimnicki Construction Solutions, in Greenville, PA, he decided that he wanted to make a career out of it.

Krzysztof heard about Rosedale Tech from his friend, Tyler Moore, and after receiving some marketing materials from a career fair decided to enroll at the school in August.

Mateusz, the oldest brother, didn’t decide to come to Rosedale Tech until after his brother started. Prior to enrolling, he was going to school at a local community college for business. After a year, Mateusz realized that traditional college was not for him. Hearing about all of the good things his brother was saying about Rosedale Tech, he decided to enroll in the HVAC program in September.

“Traditional college wasn’t for me. I decided to leave and enroll in the HVAC program because there are so many job opportunities out there for it. Someone is always going to need help with heating and cooling needs,” said Mateusz.

Krzysztof and Mateusz are both happy with their decisions to come to Rosedale Tech. Both stated that their favorite thing about the school is the work environment and the instructors.

“The instructors are always excited to teach and work on projects with the class,” said Krzysztof. “It’s a nice change from the high school atmosphere. We have a lot more independence here.”

“I like it a lot. The environment is great, and the students and instructors are very friendly. Since starting in September, I’ve already learned so much,” said Mateusz.

The Art of Shop and Sushi

Automotive student John Chang likes working with his hands, which is one of the main reasons he chose to pursue the automotive field. When he’s not working on cars in the shop, he continues to be hands-on perfecting the skill of making fresh sushi.

Since he was 16 years-old, John has helped his mother with their family sushi business, Advance Fresh Concepts, which serviced local grocery stores in New Jersey, Pittsburgh and West Virginia for over 12 years. John had recently taken over his mother’s West Virginia location, a Kroger store in Morgantown.

Between class and his job at P&W BMW in Shadyside, John had found time to be able to balance school, work and the sushi business. At Rosedale, he enjoys the hands-on training the classes and being able to work on different vehicles that he’s not used to working on, such as a Cadillac CTS.

“Some of the engine components of the Cadillac are really difficult, so it was great to learn how to work with them,” he said.

With all that has been going on in his life, John stated that he has recently found a little bit of unexpected free time. A recent change has placed a national retail sushi company in charge of all retail establishments on the east coast, removing him and his mother from their current retail locations. Despite this misfortune, John is taking this opportunity to focus on his future career as an automotive technician. His mother, on the other hand, is taking advantage of the break and doing some traveling.

Expected to graduate in March 2015, John is focused on finding a technician position at an automotive shop in the area. While he still enjoys working with sushi, he stated that plans to reopen the family business are on hold for a while.

*December start
You have ever stopped to think about what your future holds? As you get older, you imagine what kind of life you’ll have, you wonder what you’ll be doing and if you’ll be successful. Once the idea of having to pick what you want to do for the rest of your life sets in, it can be intimidating; you want to make the right choice and do something that you love, but you also want to be successful so that you can take care of yourself and maybe even a family someday. So what do you do? Luckily for me I had help making my decision. Being a tomboy growing up it was pretty awesome having a dad who (in my eyes) could fix almost anything. No matter what needed done, he always allowed me to help and encourage my interests with tools; even if it meant taking apart our family computer and not knowing how to put it back together.

Unfortunately my parents, like most, struggled with money and always had less than desirable cars, and let’s face it, the cheapest mechanics are not cheap. After watching my dad get taken advantage of time after time, year after year, because he couldn’t afford to go to another shop that’s when I knew what I wanted to do.

One thing that we always did was go to car shows, so not only did my dad spark my interest in cars, but because of his hard work and determination he gave me the desire to want to help others and give back as much as I could.

My goal is to one day own and run my own shop as well as building my dad whatever car he can dream up. I chose Rosedale because I actually have two friends that went there, not to mention it’s only a 10-minute drive, the staff and teachers could not be more supportive, considerate and as concerned about us having a successful future as we are. I’ve met such amazing people here, and honestly, don’t know where I would be in life if I didn’t come here. Attending Rosedale Technical College has truly changed my life for the better and I can’t wait to graduate and make all of my instructors proud.

### Evening Career Fair, “Hiring Days” Puts Students In Front Of Top Industry Employers

Rosedale Tech hosted an evening career fair on Wednesday, November 12 in the Shoobox. A total of 25 representatives from 20 employers attended the event.

Students from the school’s automotive, diesel and electrical programs attended the career fair and had the opportunity to meet with some of the industry-leading employers hiring in the area.

#### New Technology Installed at Rosedale Tech

In order to keep up with the changing industry, Rosedale Tech has recently updated some of the equipment used in the automotive, diesel and truck driving programs. In addition, instructors are beginning to utilize some newer techniques in the classroom to teach everyday concepts in a more picturesque manner. Here are some of the recent changes occurring:

**Tire Alignment Rack**

This fall, the automotive program received a new tire alignment system, a HawkEye Elite from Hunter. The new system includes all of the latest software as well as a barcode scanner, which allows for the students to insert the car’s information more efficiently.

“The model we just installed is the type of equipment our students are going to find in today’s shops,” said Automotive Instructor Brian Winter.

Rosedale Tech kept one of its older systems as it is still being used in some shops. Both alignment systems use John Bean scissor alignment lifts with 10,000 lb. capacity. In addition, results are now displayed on 60” flat screen TVs allowing for classes to view the alignment process easier.

**Truck Driving Simulator**

A new simulator was recently installed in the truck driving classroom. The TranSim/VSTM, a product of L3 Communications L-3 Simulator & Training business division, is designed to provide individuals with realistic, risk-free driving scenarios prior to taking a truck out onto the road. Utilizing the simulator can also reduce accidents as well as potentially save up to 15% fuel consumption by teaching progressive shifting and fuel management training.

The new simulator replaces the older model that the truck driving program used to utilize.

**Animations in the Classroom**

As a way to teach complex areas more clearly, some of the instructors at Rosedale Tech have begun to utilize animations as a teaching mechanism in the classroom. Hydraulics Instructor Brian Winter also stated that he has used animations in his classroom to depict brake systems.

### Why I Chose To Attend Rosedale Technical College

By: Jaclyn Movitch

Hiring Days! Page 4 The Circuit

Displaced Workers

Life Misfortunes Brings Husband and Wife New Opportunities At Rosedale Tech

According to Murphy’s Law, “if anything can go wrong – it will.” For husband and wife Todd Evers and Vicki Jones, things went wrong all at once. Their misfortunes, however, turned out for the better and led them both to Rosedale Tech.

Working in shipping and receiving for 10 years at a local video production company in Downtown Pittsburgh, Vicki was let go of her position. About six months after losing her job, Todd received news that he would be losing his job as well.

Both unsure what to do at that point they began to look into going back to school for retraining. A military veteran, Todd was able to receive veteran’s assistance, which led him to Rosedale Tech.

Just when things started to look good for the couple, the bad luck continued. Emergency surgery kept both Vicki and Todd off their feet for a while.

“We were a mess for a good three years,” said Vicki. “It seemed like everything that could go wrong happened all at the same time.”

Unable to both attend school at the same time, Vicki got a job working 3rd shift at Walmart while Todd attended school. Upon Todd’s graduation from the HVAC program, the couple decided it was Vicki’s turn.

Vicki was still unsure what she wanted to do and was trying to decide between two career paths. Seeing her husband’s successes and hearing all of the great things he had to say about Rosedale Tech, she decided to start in the electrical technology program in September. While attending school, she still kept her job at Walmart.

“I get off work at 7:00 a.m. and come straight to school,” she said. “I’m enjoying my classes a lot. I’m learning things that I didn’t know before.”

Todd currently works as a technician for McKean Plumbing & Heating in Washington, PA. Vicki is expected to graduate in January 2016. When asked if a family business was in their future, Vicki laughed and said, “Absolutely not. We’d get a divorce.”

Why I Chose To Attend Rosedale Technical College

By: Brian Lukens

The reason I chose to attend Rosedale Tech was to further my education, particularly in the HVAC program. After I got laid off from my job I didn’t know what I wanted to do, but I knew I wanted it to be a trade. I researched trades online to see which was the fastest growing that Rosedale Tech offered and HVAC was one of them. Fortunately for me, I personally know an HVAC contractor who let me do several ride-alongs with him and eventually allowed me to help him with installations of units. After helping him for a few months, he convinced me to go to school because he said it wasn’t like when he started out; that you actually had to have a degree today to do this job. I scheduled a tour at Rosedale Tech with Dave Hirak and was impressed with everything I saw. I enrolled in August of 2013 and it was one of the best decisions that I have made in a long time. After I was enrolled, I began thinking back to my previous job and how I dealt with diesel engines. I started talking to some of the diesel students about the program and some of the projects they have been doing. After much consideration, I decided to enroll in the diesel program after I complete my HVAC degree.* My reasoning behind it all is that I know that it will make me more marketable in my future job search and career opportunities. I am very excited about the decisions I have made.

*Brian completed the HVAC program November 20, 2014. He started his second program on November 24, 2014.

Rosedale Students from Horsehead In The News

In the last issue of The Circuit, we highlighted students who are attending Rosedale Tech after being laid off from Horsehead when they closed their Monaca, PA plant. These same students were recently featured in an article published by the Pittsburgh Post-Gazette.

To read the article, go to www.post-gazette.com/business/2014/11/02/Unemployed-plant-workers-in-Beaver-County-schooled-for-new-jobs/
Happy Thanksgiving

Students, faculty and staff celebrated the Thanksgiving holiday with delicious apple and pumpkin pies. Thank you to Steel Toe Station for providing the sweet treat!

2014 Turkey Drive Gives Local Families Something To Be Thankful For

Rosedale Tech kicked off the 2014 holiday season joining forces with former students Joe and Josh Ruffing to help with their annual Turkey Drive. The Ruffing brothers and their family collect items to build Thanksgiving meals for local families in need. The Rosedale family was quick to lend a hand and collected non-perishable food items as well as monetary donations to purchase turkeys.

Overall, the school collected an abundance of food items as well as $270 in cash donations. Rosedale Tech’s efforts helped to prepare 163 meals for local families in need.

A Big Thank You To All Who Participated!
Drew Sundquist Hired as New Diesel Instructor

There’s a new face in the diesel program at Rosedale Tech; Drew Sundquist joins the Rosedale family as the newest Diesel Instructor. Originally from Detroit, Drew worked for Chrysler for 13 years in the Jeep and Truck Division. In addition, he worked with Borg-Warner Automotive as a Prowtrain engineer.

Drew brings a wealth of experience and knowledge to his new position. He earned a Bachelor’s Degree in Electrical Engineering from Cooks Institute in Jackson, MI. In addition to his work experience, Drew has been inventive and is responsible for patenting six different parts used in four wheel drive vehicles, automatic transmissions and clutches. Upon moving to Pennsylvania with his wife, Drew obtained teaching experience with New Castle School of Trades in the Diesel Technology and Power Generations departments. In his free time, he is working on writing a book on Electric Power Generation, restoring his 1955 Desoto, and has served as a volunteer fire fighter in the Detroit and West Middles area for over 32 years.

Drew is excited to start in his new role at Rosedale Tech.

“I should have started teaching 20 years ago. I love it,” he said. “My favorite thing about it is seeing the light bulb go on for students – sometimes it takes just 10 seconds, and other times it may take 10 days. I’m hoping that I can help make a difference in the students’ lives as well as continue to grow the diesel program.”

Meet Krista Myers

Rosedale Tech welcomes Krista Myers as a Student Services Coordinator. Krista joins the Career Services Department and will have responsibilities with Liz Lanschak on job placement for the growing number of students attending the school.

A New York native, she graduated from the University of Rochester where she double majored in Psychology and Religious Studies with a minor in Anthropology. Krista comes to Rosedale Tech from Junior Achievement of Western PA where she was the Manager of STEM Initiatives. In her position, Krista recruited companies, schools and volunteers for involvement in implementation and expansion of careers in Energy.

As one who enjoys helping others, Krista is very excited to work with the students. “There’s nothing better than having a job you love. I hope to help students change their lives and get a meaningful job,” she said.

“I’m pleased to welcome Krista to our team. Rosedale Tech grads are in high demand and I am confident that she will be a great asset for placing our grads in the right career,” said Assistant Director and Director of Student Services Amy Pascarella.

Outside of work, Krista enjoys listening to music, reading, going to sporting events, and traveling. One of her most memorable trips she mentioned was when she studied abroad in New Zealand.

Welcome Krista!
Faculty, Staff Are “All About The Trades”

Check out Rosedale Tech’s Facebook page for a link to view the school’s spoof of Meghan Trainor’s “All About the Bass”.

Rosedale Tech recently welcomed Choffin CTC, A.W. Beatty CTC, Student Achievement Center, and Beaver CTC to the school to tour the facility and learn about job opportunities available in the trades. If you are interested in scheduling a field trip, contact Education Outreach Manager Ben Martin at 412-521-6200.

High School Field Trips Offer Students Glimpse of Career Opportunities in the Trades

**CHOFFIN CTC: NOVEMBER 14, 2014**
